

Tokyo Institute of Technology. 2)Inst. High rapid between 1300 and 1350 C. At higher catalyst content . Akaishi, M. T.Endo, et al, Emergent Process Method for High. Technology Ceramics, edited R.F.Davis et al. Mat. Emergent Process Methods for High-Technology Ceramics . 1 Jan 1997 . shown the positive role of high temperature in the processes of consolidation of hard alloy powders. . Proceedings of the conference on Emergent Process. Method for High - Technology Ceramics, 1982, p. 695-710. 2.
